

JOANNA BRIGGS INSTITUTE

EVIDENCE-BASED CLINICAL FELLOWSHIP PROGRAM

Want to get evidence into your day to day practice?

The Evidence-based Clinical Fellowship Program provides clinicians, managers, policy makers and quality managers in healthcare with proven approaches to implementing evidence into practice.

During the program participants:

- further develop their clinical leadership skills and strengths
- conduct clinical audits and engage in quality improvement processes
- become familiar with frameworks and software to get research into practice and to apply practically clinical evidence
- develop and execute strategies to implement evidence-based practice in their own work environment.

“The one-on-one time with my facilitator, and continued support throughout were invaluable. Having a [JBI] Research Fellow as my facilitator meant that my published report was of a really high quality...”

See reverse for dates and more information.

JOANNA BRIGGS INSTITUTE

Passionate about improving care?

The Evidence-based Clinical Fellowship Program empowers healthcare professionals to improve patient outcomes by equipping them with skills and knowledge to implement evidence into practice.

During the six-month program participants attend two five-day intensive training workshops (Weeks 1 and 2) at JBI, and in the intervening months conduct an evidence-based implementation project in their workplace.

At the end of the program, participants have a report ready to be published in a peer reviewed journal and accessible in international medical databases and Google scholar.

The Evidence-based Clinical Fellowship Program includes the Clinical Leadership Workshop, a dynamic and interactive workshop, taking place during Week 1.
